" Although, our platform is currently hosted in the Data Center, we're currently working on migrating to the cloud. From the little feel that I've gotten from our cloud test environment, the premium version gives you features like Project Automation which is super dope for automation especially in Jira Service Desk as well as Advanced Jira Roadmaps which enables you to manage team capacity across multiple teams as opposed to the basic roadmaps that comes with the standard version. This is simply to mention a few because there's also the 24/7 premium support and unlimited storage. So the premium version is the deal!

— Peter Akinsipe, Products Administrator, DOS
