

Atos IT Services

Introduction

This case study of Atos IT Services is based on a March 2017 survey of Cisco Advanced Malware Protection customers by TechValidate, a 3rd-party research service.

“Deploying AMP for Endpoints alongside other AMP deployments has helped my organization uncover threats faster and improve overall security effectiveness. ”

“AMP for Endpoints offers an easy-to-use interface, real-time endpoint monitoring, and ‘threat by group’ to determine problem areas. AMP for Endpoints provides Cloud Malware Analysis with Threat Grid and enables easy applying of whitelists/blacklists and exclusions.”

Challenges

The business challenges that led the profiled company to evaluate and ultimately select Cisco Advanced Malware Protection:

- Chose AMP for Endpoints for the following reasons:
 - Superior protection from advanced threats and hackers
 - Rapid time to detection of threats
 - Endpoint visibility into file activity and threats
 - Ability to continuously monitor file behavior
 - Retrospective alerting to uncover stealthy attacks
 - Ability to quickly understand the threat and what it’s trying to do
 - Simple, easy to use management interface

Use Case

The key features and functionalities of Cisco Advanced Malware Protection that the surveyed company uses:

- Deployed the following in addition to AMP for Endpoints:
 - AMP for Networks (AMP on Cisco Firepower NGIPS)
 - Cisco Threat Grid

Results

The surveyed company achieved the following results with Cisco Advanced Malware Protection:

- Was able to do the following with AMP for Endpoints:
 - Improve security effectiveness
 - Prevent breaches
 - Detect threats faster
 - Increase visibility into potential threats
 - Remediate advanced malware
 - Accelerate incident response
 - Reduce management complexity using Cisco AMP’s integrated architecture
- Evaluated the following companies prior to signing up with AMP for Endpoints:
 - Palo Alto
 - Symantec
 - McAfee
- Prevented/Detected/Defeated the following with AMP for Endpoints:
 - Advanced malware or advanced persistent threats (APTs)
 - Ransomware
 - Malvertising
 - Malicious email attachments
- Reduced threat detection time by by more than 12 hours with AMP for Endpoints.
- Experienced improvements in the following areas after deploying AMP for Endpoints:
 - Mean time to detection of previously unseen and/or unknown threats
 - Executive confidence in the security of the organization
 - Investigation speed and/or quality
 - Visibility into endpoints, vulnerabilities, and threats
 - Time to remediation
