

4.5/5 Stars

How our organization uses Cisco Threat Response:

Alerts in SIEM for network or malware alerts are moved to Threat Response for investigation and remediation. Threat intelligence feeds with IoCs are used in Threat Response to do hunting or to check for impact in our organization

Would you recommend Cisco Threat Response?

Yes, because of what I stated in the previous response and also as a cloud service it's easy to set up and also it's very easy and intuitive to use so requires very little training to get started.
