

4/5 Stars

How our organization uses Cisco Threat Response:

In almost all cases threat response is used for incident response and dealing with malware intrusions. Threat Response is used to see if there is a network-wide issue, jump to investigations and analysis of files and make decisions on what course of action we take.

Would you recommend Cisco Threat Response?

Absolutely, threat response gives us a level of visibility and supporting information the likes of which I have never seen in another product.
