5/5 Stars

How our organization uses Ranorex Studio:

“Starting from smoke tests to end-to-end testing, we use Ranorex Studio for all repeated testing scenarios. We also use a unique approach called ‘early automation’ where the automation test will be ready even before the application build is available for testing. We assume the X-paths and implement test case automation even without the UI available. Once the UI is available as a build, then we run the automation scripts to verify them and hence achieve early automation of tests.

Would you recommend Ranorex Studio?

“Recommend 100% because the tests are easy to maintain and modular. Early automation is possible with Ranorex Studio. So we would like to recommend it to all new teams.
