

4/5 Stars

Please describe how your organization uses Ranorex Studio.

Mostly for functional regression testing. Common activities have been automated & data-driven testing to provide wide-ranging combinations of data. Also to sanity test each new build.

In a few sentences can you share some ROI results you have seen since implementing Ranorex Studio. Please consider revenue, productivity, etc.

Greater functional & regression testing coverage is improving the quality of the delivered product, resulting in fewer post deployment defects. This, in turn, is enabling the team to detect defects earlier in the SDLC as regression test cycles are becoming shorter.
