

# Large Enterprise Insurance Company

## Introduction

This case study of a large enterprise insurance company is based on an October 2020 survey of Kenna.VM customers by TechValidate, a 3rd-party research service. The profiled company asked to have their name blinded to protect their confidentiality.

“Kenna has helped us to spend less time determining risk and prioritizing actions that we can now spend focusing on remediation actions. ”

“The customer success managers and engineers are an extremely important part of this service and help us to understand our needs, wants, and drive risk reduction.”

## Challenges

The business challenges that led the profiled company to evaluate and ultimately select Kenna.VM:

- The vulnerability management challenges they were experiencing that led them to implement the Kenna.VM:
  - Too many vulnerabilities with no way to effectively prioritize
  - High volume of security data lacking context for decision making
  - Not having a way to quantify or measure risk from vulnerabilities
  - Inefficiencies in vulnerability remediation

## Use Case

The key features and functionalities of Kenna.VM that the surveyed company uses:

- The approach they used to prioritize vulnerabilities prior to Kenna:
  - A rating system from scanner
- They best describe their current engagement model between the Security and IT team as Security investigates and prioritizes vulnerabilities; IT remediates.
- The criteria they use to evaluate the success of your Kenna.VM implementation:
  - Reduction in Mean Time To Remediate (MTTR)
  - Kenna risk score reduction
  - Reduction in vulnerability investigation time
  - Reduction in reporting time

## Results

The surveyed company achieved the following results with Kenna.VM:

- Before Kenna vs. After Kenna: Have you seen a reduction in time spent on the following activities? (Security and IT team time combined)
  - time spent on Vulnerability Investigation: over 75%
  - time spent on remediation: 50 – 75%
  - time spent on reporting: over 75%
- Kenna’s primary advantage(s) over other vulnerability management platforms:
  - Kenna goes beyond basic risk scoring and tells me what I need to fix first
  - Kenna provides meaningful and actionable data for remediation (remediation intelligence)
  - Kenna provides awareness of how much risk is in our environment
  - Kenna is updated continuously with real-time information
  - Kenna includes multiple threat intel feeds (eliminating the need for subscription)
- Rates the following for Kenna.VM compared to other vulnerability management solutions:
  - remediation Intelligence (guidance on “what to fix first”): highly superior
  - integrated real-time global exploit intelligence: highly superior
  - data science-based risk scoring methodology: highly superior
  - “Off the shelf” integrations with a wide range of security data sources: on par
  - predictive vulnerability modeling: on par

### Company Profile

The company featured in this case study asked to have its name publicly blinded because publicly endorsing vendors is against their policies.

TechValidate stands behind the authenticity of this data.

Company Size:  
**Large Enterprise**

Industry:  
**Insurance**

### About Cisco Vulnerability Management

Cisco Vulnerability Management (formerly Kenna.VM) offers an effective, efficient way to reduce your risk profile using risk-based prioritization powered by data science. Rely on it to ID the vulnerabilities that put you at the greatest risk, create a self-service environment for remediation teams, set intelligent SLAs based on your risk tolerance, compare your risk posture against industry peers, deliver clear reports with intuitive metrics, and more.
