LabWare® – Extensive Functionality for a Contract Bioanalytical Laboratory

★★★★★

5/5 Stars

How our organization uses LabWare:

" LabWare® LIMS is implemented to a very high degree. The standard LIMS functionality is used for project management, sample management, inventory management, equipment management, and reporting in Excel. Another functionality that has been implemented in all our procedures is managed in Document Manager, online temperature monitoring including automated investigations on out of specs, (working) time registration, billing of sample storage, task management, CAPA management, and clinical trial management. "
