

## Over 75 Locations using LabWare®!

5/5 Stars

How our organization uses LabWare:

Our corporate and regional labs do microbiology, chemistry, serology, wastewater, R&D, and research-related testing in LabWare® LIMS. We have about 75 other locations, such as production plants, rendering, and wastewater operations using LIMS around the country. We manage this as a team with one business side admin and one Information Services side admin. Operations are also supported in Brazil and Mexico with one database in the US and using National Language Support.
