

5/5 Stars

How our organization uses CABINET VISION:

“ We utilize CABINET VISION when quoting – jobs are created quickly to let S2M CENTER nest for material yields and hardware quantities. We use CABINET VISION in creating shop drawings to submit for customer/architect approval. We use CABINET VISION/S2M CENTER to output .cix files to bsolid at our router.

Would you recommend CABINET VISION, and if so, why?

“ Yes, it’s easy to learn the basics. Once set up properly (if you don’t have the experience I would recommend paying for some training time on the front end to get it set up properly) it is extremely accurate and efficient at creating any type of custom cabinet you want to build. If you want to get more involved it is infinitely customizable to make the program run how you want to if you have the programming knowledge. Its communication directly with the CNC saves us countless hours of programming time.
