

4.5/5 Stars

How our organization uses ALPHACAM:

We mainly use Alphacam for making furniture and occasionally for Joinery parts. It allows us to cut sheet material faster and more accurately than before. Complex components can be made in a fraction of the time in comparison to old manufacturing methods. Grooving, drilling, chamfering and cutting can be performed by one machine saving many man hours.

Why I recommend ALPHACAM:

Yes, it has made the initial stages of workshop manufacturing much faster and efficient, saving time and therefore money.
