

4/5 Stars

How our organization uses CABINET VISION:

We use CABINET VISION primarily for institutional casework cabinets. We have one-off special items that we push CABINET VISION beyond its limits to fabricate custom casework. It takes some struggling, but it allows us to “virtually create” the items, find holes or flaws in the construction before mistakes are made on the shop floor, and correct or adjust those parts to make everything come together in the end.

Would you recommend CABINET VISION, and if so, why?

CABINET VISION would be very useful to those that run mass production of casework cabinets. It is very good at this, and would be recommended for this purpose. Its “drag-and-drop” capabilities for quick room design work well when everything is set up properly.
