

4.5/5 Stars

How our organization uses CABINET VISION:

We provide custom residential and small commercial cabinets to our customers. CABINET VISION is used primarily in engineering to prepare the shop drawings and CNC output.

Would you recommend CABINET VISION, and if so, why?

Yes, before CABINET VISION we were using a library of saved parts/cabinets in ALPHACAM and outputting to a nested-based router. The time savings in the programming and output times were significant. I have been using CABINET VISION for 10 years now and am still finding new ways to use it to improve our operation.
