

Global 500 IT Services Company uses NETSCOUT DDoS Solutions to protect game-changing businesses and nurture them for long-term success

NETSCOUT Arbor solutions reduced Mean Time to Resolution (MTTR) by **80–100%**. Arbor Edge Defense, Arbor Cloud, and Threat Intelligence from ATLAS® and ASERT are important to guard against DDoS attacks because they:

- Detect, and mitigate DDoS attacks that impact the availability of network, services, or stateful security devices
- Detect and block inbound IoCs, brute force password attempts, and reconnaissance
- Detect and block outbound IoCs or communication from compromised internal devices communicating with attacker command and control infrastructure
- Stop DDoS attacks or other cyberthreats embedded in encrypted traffic
