

Senior Network Engineer says Arbor Edge Defense is extremely important for stopping inbound and outbound threats at the network perimeter

A Global 500 banking company utilizes NETSCOUT Arbor Edge Defense and Arbor Cloud to effectively stop complex DDoS attacks as efficiently as possible before they impact the network, business-critical applications, or services. It can also effectively stop state-exhaustion DDoS attacks before they impact stateful network devices such as firewalls, VPN gateways, or load balancers. Finally, it complements the cloud-based DDoS protection from our ISP/CDN provider with on-premises DDoS protection to improve security posture and decrease time to detect and respond to threats on-prem and in the cloud.
