

Bell improved visibility by more than 50% and reduced MTTK by 40-50%

5/5 Stars

Describe your latest experience with NETSCOUT product or support

We recently started to deploy nGenius®PULSE and nPoint to many locations across our network for testing applications residing in our data centers.

Would you recommend NETSCOUT solutions, and if so, why?

Using NETSCOUT products for many years and have always been **impressed with product capabilities as well as support**. NETSCOUT converts packet data into meaningful information which helps our organization **monitor critical applications** and do deep packet inspection when issues occur.
