# IT Security Architect says NETSCOUT is Best-in-Class to solve cybersecurity challenges

Arbor Edge Defense is extremely important to:

- Detect, and mitigate DDoS attacks that impact the availability of network, services, or stateful security devices

- Detect and block inbound IoCs, brute force password attempts, and reconnaissance attempts

- Detect and block outbound IoCs or communication from compromised internal devices communicating with attacker command and control infrastructure

- Stopping DDoS attacks or other cyber threats embedded in encrypted traffic
