

Large bank says Arbor Edge Defense is Best-in-Class for helping their company reduce security risks

5/5 Stars

Please describe how your organization uses NETSCOUT Arbor products, technologies, and services.

We use Arbor Edge Defense devices as part of our DDoS mitigation system complementing another vendor’s cloud solution. The combination has proven to be very effective and works well together. As the AED’s are always monitoring traffic they are the first to detect and protect our stateful devices hosting service while the cloud solution starts scrubbing. While the cloud element is live the AED devices continue cleaning any attack traffic leakage.

Would you recommend NETSCOUT Arbor products, technologies, and services, and if so, why?

We were lucky enough to be in a position to test the AED devices a number of times and in each test the devices exceeded our expectations.
