

School district achieves academic excellence using the most effective method of assuring service delivery across the hybrid cloud

4.5/5 Stars

Reason for rating:

“ 100% agree that analyzing traffic data at the source is the most effective method of assuring service delivery across any hybrid cloud. NETSCOUT consistently works for me, shortening the time it takes to find the root cause and what may need to be changed or added.

Source: Greg Martien, Network Engineer, St. Vrain Valley School District
