"A Must Have"

★★★★★

5/5 Stars

How our organization uses the CLC Microbial Genomics Module:

> " CLC Genomics Workbench is our primary bioinformatics software. Our lab is typically focused on validated, standardized methods and CLC tools seem to fit that need. We also focus on microbial sequencing and we would not be able to do even half of our typical analyses without the Microbial Genomics Module. The primary features we use are shotgun taxonomic profiling and K-mer spectra typing. As we develop more services, I can see us using the resistance finding, K-mer/SNP trees, functional metagenomics, and amplicon (16S) metagenomics.

Would you recommend the CLC Microbial Genomics Module?

> " Yes, if you are working with bacterial genomics, then it is a must-have.
