

Please share a recent success you've realized by using Qlik with Epic.

“ After identifying opportunities for investigation, with a single click, clinicians can dive into patient-specific information in the EHR to answer all questions / solve the full problem. This allows us to avoid PHI / PII stored in dashboards, facilitating more open access and transparency.

Would you recommend Qlik for Epic?

“ I would because of the flexibility of the tool to collate data from disparate mature sources with primitive sources. Much of the organization is at varying levels of maturity with their data, but the analytics needs are more advanced than the data readiness.
