

## Case Study: Medium Enterprise Financial Services Company

“We needed to find a performance monitoring solution for our Oracle database instance that was less expensive than Oracle Enterprise Manager.”

“We really like the user interface and think it’s better than the competition. We liked the idea of buying a vendor solution rather than “rolling our own” performance collector and having to support it constantly. DPA has been pretty much maintenance free which is important to us.”

### Challenges

- Purchased DPA to:
  - Improve visibility into the database and the systems that support it
  - Accelerate root-cause identification for performance problems
  - Help database professionals spend less time looking for problems inside the database

### Use Case

- Platforms:
  - Windows
  - VMWare
- Database engines:
  - SQL Server
  - Oracle

### Results

- Realized the following benefits as a result of using DPA:
  - Increased database performance and end user experience
  - Improved visibility into their environment and improved collaboration (less finger pointing for troubleshooting)
  - Achieved faster problem resolution and more proactive management of databases
  - Has the ability to find problems that were hard or impossible to find before

#### About SolarWinds Database Performance Analyzer

Quickly identify and resolve complex database performance problems—right from code-level issues and query wait time analytics to resource capacity bottlenecks across physical, virtual and cloud environments.
