solarwinds

Case Study: CPC Logistics

> " "[DPA lets us] drill down directly to the problem. In one instance, it was just a couple of indexes which were identified by a drilldown into a SP's query plan."

Challenges

- Purchased DPA to:
    - Improve end-user response time (application performance)
    - Improve database performance
    - Improve visibility into the database and the systems that support it
    - Accelerate root-cause identification for performance problems
    - Monitor overall health of our databases and be alerted when issues arise
    - Help database professionals spend less time looking for problems inside the database

Use Case

- Platforms:
    - Windows
    - VMWare
    - Other Virtualization
- Database engines:
    - SQL Server

Results

- Realized the following benefits as a result of using DPA:
    - Saved money on hardware investments as a result of performance optimization
    - Increased database performance and end user experience
    - Improved visibility into their environment and improved collaboration (less finger pointing for troubleshooting)
    - Achieved faster problem resolution and more proactive management of databases
    - Gained time to focus on more important or strategic parts of my job
    - Has the ability to find problems that were hard or impossible to find before

About SolarWinds Database Performance Analyzer

Quickly identify and resolve complex database performance problems— right from code-level issues and query wait time analytics to resource capacity bottlenecks across physical, virtual and cloud environments.
