

## Case Study: Membership Organization

“We downloaded a trial version and were able to identify and quickly resolve performance issues. The ease of use and ability to rename the queries are excellent!”

“Ignite allows me to quickly respond to issues that arise. But, the historical information gives me a chance to take preventative measures before things get out of control.”

“I love this product! You will easily and quickly understand the activity in your databases. You will be able to address problems before the end-users become aware of them.”

### Challenges

- Purchased DPA to:
  - Improve end-user response time (application performance)
  - Improve database performance
  - Accelerate root-cause identification for performance problems

### Use Case

- Platforms:
  - Windows
- Database engines:
  - SQL Server
  - Oracle
  - MySQL / MariaDB / Percona

### Results

- Realized the following benefits as a result of using DPA:
  - Increased database performance and end user experience
  - Achieved faster problem resolution and more proactive management of databases

#### About SolarWinds Database Performance Analyzer

Quickly identify and resolve complex database performance problems—right from code-level issues and query wait time analytics to resource capacity bottlenecks across physical, virtual and cloud environments.
