

Case Study: Next Wave Logistics

“We needed to know more about what was going on inside of our SQL database. DPA allowed us that capability.”

“DPA gives a deeper dive into the metrics, [and] that allow us to make choices on what best can be done around performance. The data can also be presented to clients in the native information as produced.”

Challenges

- Purchased DPA to:
 - Improve end-user response time (application performance)
 - Improve database performance
 - Improve visibility into the database and the systems that support it
 - Accelerate root-cause identification for performance problems

Use Case

- Platforms:
 - Windows
 - VMWare
- Database engines:
 - SQL Server

Results

- Realized the following benefits as a result of using DPA:
 - Saved money on hardware investments as a result of performance optimization
 - Improved visibility into their environment and improved collaboration (less finger pointing for troubleshooting)

About SolarWinds Database Performance Analyzer

Quickly identify and resolve complex database performance problems—right from code-level issues and query wait time analytics to resource capacity bottlenecks across physical, virtual and cloud environments.
