Challenges in Moving Databases to Cloud
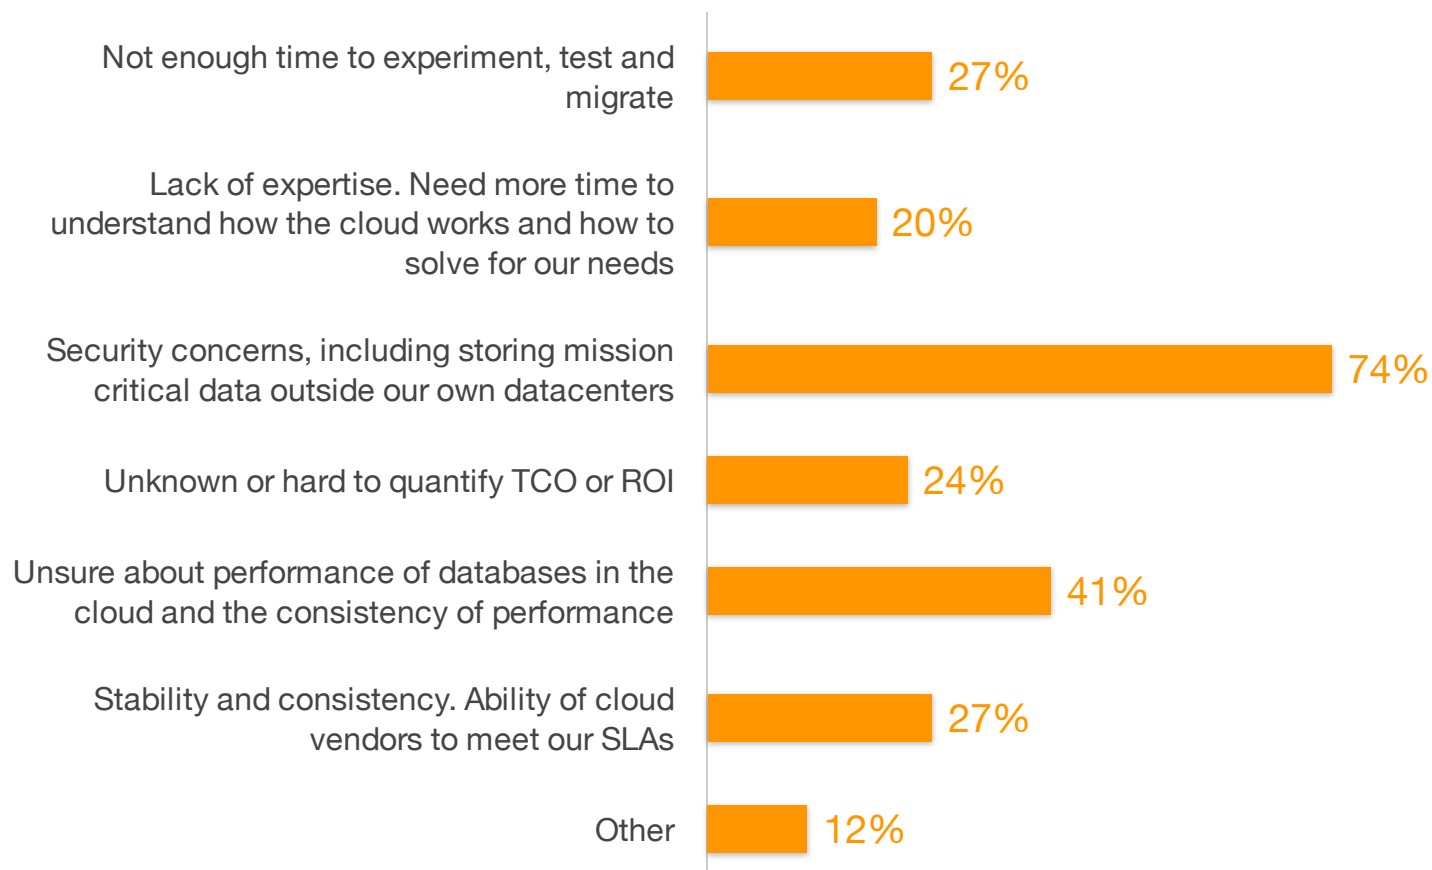

What are the primary challenges in moving databases to the cloud?

Challenge	Percentage
Not enough time to experiment, test and migrate	27%
Lack of expertise. Need more time to understand how the cloud works and how to solve for our needs	20%
Security concerns, including storing mission critical data outside our own datacenters	74%
Unknown or hard to quantify TCO or ROI	24%
Unsure about performance of databases in the cloud and the consistency of performance	41%
Stability and consistency. Ability of cloud vendors to meet our SLAs	27%
Other	12%
