

SolarWinds Database Performance Analyzer Customer Review

4/5 Stars

What is the biggest benefit of using SolarWinds DPA?

The biggest benefit is at a glance analysis of resource wait consumption (CPU/disk/memory). We appreciate the ability to profile query round-trip performance historically and correlate it with execution plan and resource metrics at the time.

How would you describe SolarWinds DPA to a colleague?

SolarWinds DPA provides agentless monitoring, minimal impact, query-focused, in-depth analysis. It is the best tool I've ever used. Navigation of reports could be easier, but once you get over that learning curve its great.
