

SolarWinds Database Performance Analyzer

Customer Review: Hospitality

4.5/5 Stars

What is the biggest benefit of using SolarWinds DPA?

I can quickly see what queries are suffering the most wait times when trying to execute, and what those wait time are for. That enables me to quickly track what is causing my server slow downs. Also, being able to align the VMWare host metrics with the Virtual SQL Server metrics has been a huge benefit and has helps me keep our VMWare admin honest.

How would you describe SolarWinds DPA to a colleague?

It's a great tool that gives you insight into poorly running queries and helps lead to to the root cause of performance issues.
