

A Network Administrator of a medium enterprise construction company is very likely to recommend <sup>\*</sup> SolarWinds IP Address Manager for the following reason:

“SolarWinds IP is a good place to record your IP addresses and manage your DHCP and DNS. It’s constantly updating itself so you can leave it to its own devices, unless there are issues or you need to tweak it a bit. You can tell everything about what is on a particular subnet and, being a civil engineering company, we have loads.”

<sup>\*</sup> Based on a response of 9 to the question “On a scale of 0-10, how likely would you be to recommend SolarWinds IP Address Manager?”
