

SolarWinds Network Performance Monitor

Customer Review

4.5/5 Stars

How our organization uses SolarWinds Network Performance Monitor:

Active Alerts – to quickly resolve the issues before it takes down the system. Bandwidth – to quickly monitor the high bandwidth usage and alert users about network slowness. Errors and Discards – to get to know how well the hardware is functioning and if we need to upgrade the equipment.

Would you recommend SolarWinds Network Performance Monitor?

Yes, I would and have recommended Solarwinds NPM as it is the easiest tool to quickly get the view of the network and resolve issues ASAP. Plus Solarwinds other tools work amazing with NPM.
