

# SolarWinds Log & Event Manager Customer Testimonial

SolarWinds Log & Event Manager was invaluable to finally centralize not only our firewall logs, but all of our switch logs for the entire organization. If we want to investigate an issue on a switch, we're already there – with good retention and search ability. Putting File Integrity Monitoring [FIM] in place has given us unprecedented visibility into the file-level behaviors of our business and can help us better support our users.
