

5/5 Stars

How our organization uses SolarWinds Virtualization Manager:

We use VMAN to monitor every aspect of our VMware virtual environment. We monitor everything from resource usage to hardware issues. We depend so heavily on our virtual environment that things like sprawl and resource management are key. Because of VMAN, we have been able to move vm's around to maximize efficiency on every level.

Would you recommend SolarWinds Virtualization Manager?

Yes! Yes! A thousand times Yes! If you manage a virtual environment, you will wonder how you ever lived without the peace of mind and efficiency that VMAN adds to your arsenal.
