

5/5 Stars

How our organization uses Stack Overflow for Teams:

We are specialized for the CAD construction of large-scale timber construction projects. For this highly specialized work we use Stack Overflow for Teams for sharing our knowledge, ideas and manuals and keep it for new employees, even when experienced employees leave.

Would you recommend Stack Overflow for Teams?

Stack Overflow for Teams makes it much more easier to let new employees find instructions for technical and administrative issues.

Furthermore, it makes it clear from the start that given the size of our projects, they can only be successful in collaborative teamwork and the sharing of knowledge. So with Stack Overflow for Teams as one important element we live the culture of shared knowledge and support of each other.

Only with this culture we could grow and be successful.
